

ECONOMY OF
TOMORROW

Today India is in a sweet spot...

- Low oil and gas prices \Rightarrow room for investment in infrastructure
- Manufacturing is moving out of China \Rightarrow jobs
- Japan/Korea/Taiwan seek to balance China \Rightarrow FDI
- Renewable Energy Agenda of GoI \Rightarrow International cooperation

...with great opportunities for Rajasthan

Over the next decades India's competitive advantages may erode...

Digital Revolution

- Robots will bring down labour cost in industrial economies
- Quality, skilled workforce, supply chain, local governance will become more important

Energy Revolution

- Energy transformation will make energy prices go up medium term, but dramatically fall long term
- India may miss the bus on new markets for new technologies
- Lock-in into outdated energy regime (return on investment)
- Geopolitical risks to energy security

...if it misses the bus on the digital and energy revolutions

While many efforts are made to seize the opportunities...

- GoI: Make India a renewable superpower
- International cooperation
- Enormous potential for solar power in Rajasthan

- Technical problems: baseload
- Economic problem: Grid parity, value deflation
- Political economy: resistance of those who benefit from the status quo

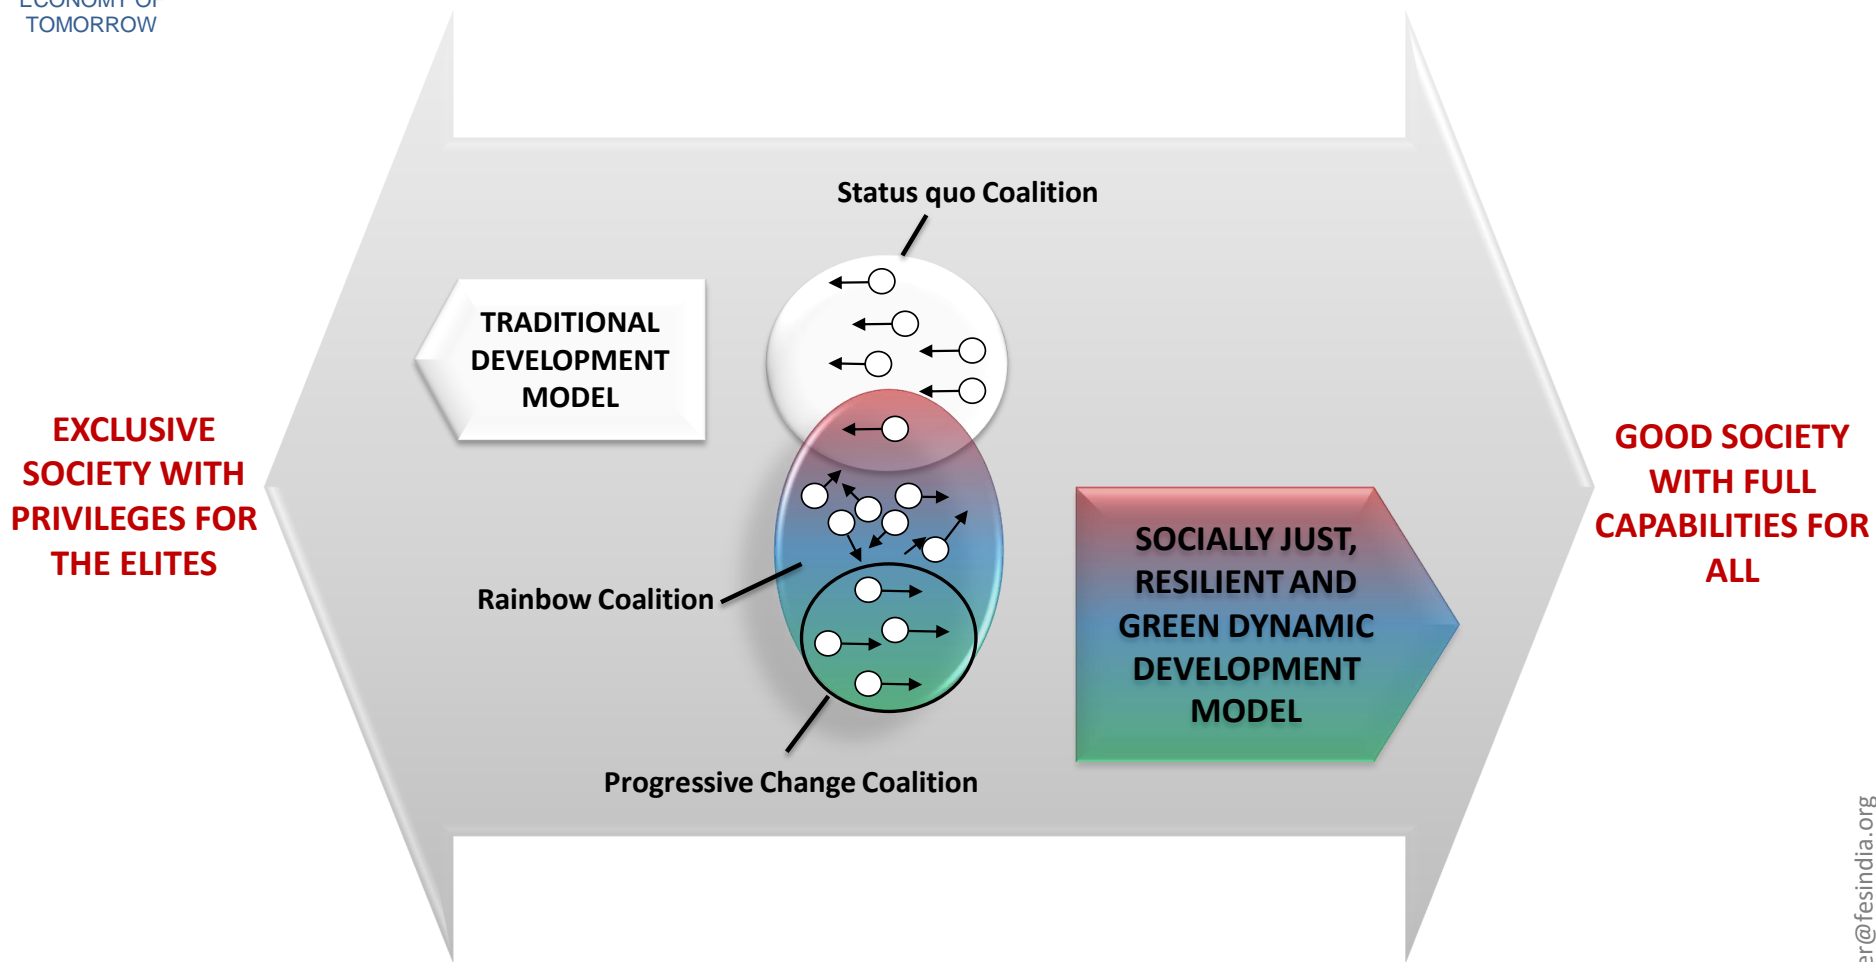

... concerted effort is needed to overcome obstacles and resistance

ECONOMY OF
TOMORROW

NEW EPISTEMOLOGY:

Change in underlying logic: From technocratic
incrementalism to political economy of change ...

... Change is the outcome of struggle between those who seek to
uphold the status quo and those who want change

ECONOMY OF
TOMORROW

NEW STRATEGY:

The ultimate objective is to build a
broad societal change coalition...

... to Rainbow Change Coalition

... via discourse alliance...

Follow up projects

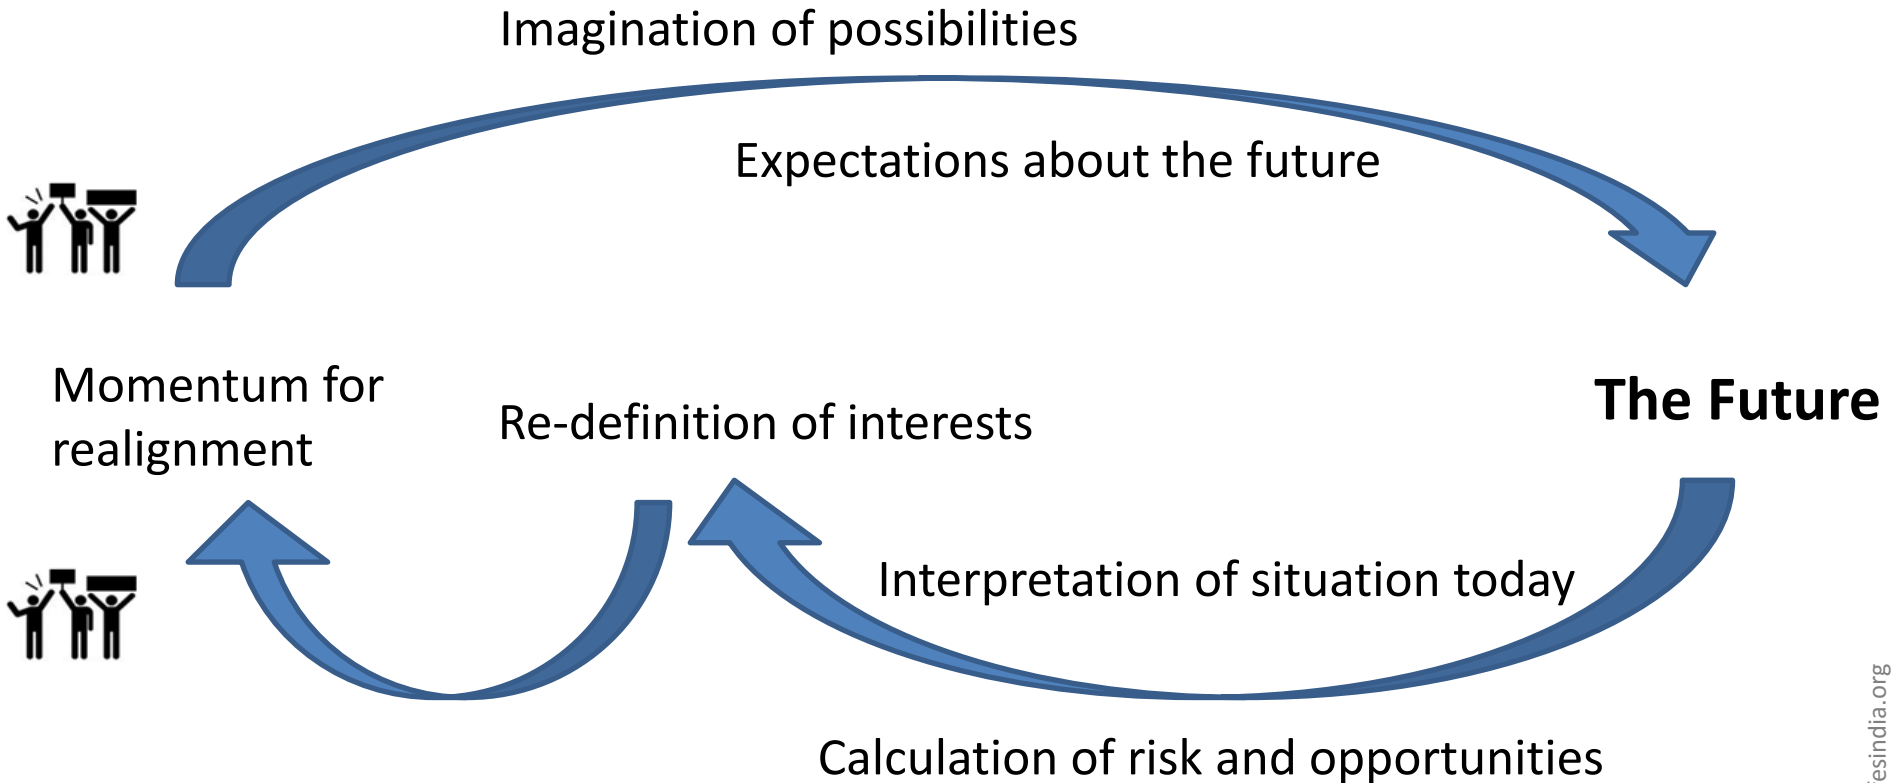

From seed community...

Our project

...to lead the struggle for a better relationship.

STEP ONE:

Unlock the stalemate / create momentum with a trick:

... project into the future as a neutral space to shake up political field

STEP TWO:

Lay the discursive and social foundation
for a change coalition ...

...with Transformative Change Making

ECONOMY OF
TOMORROW

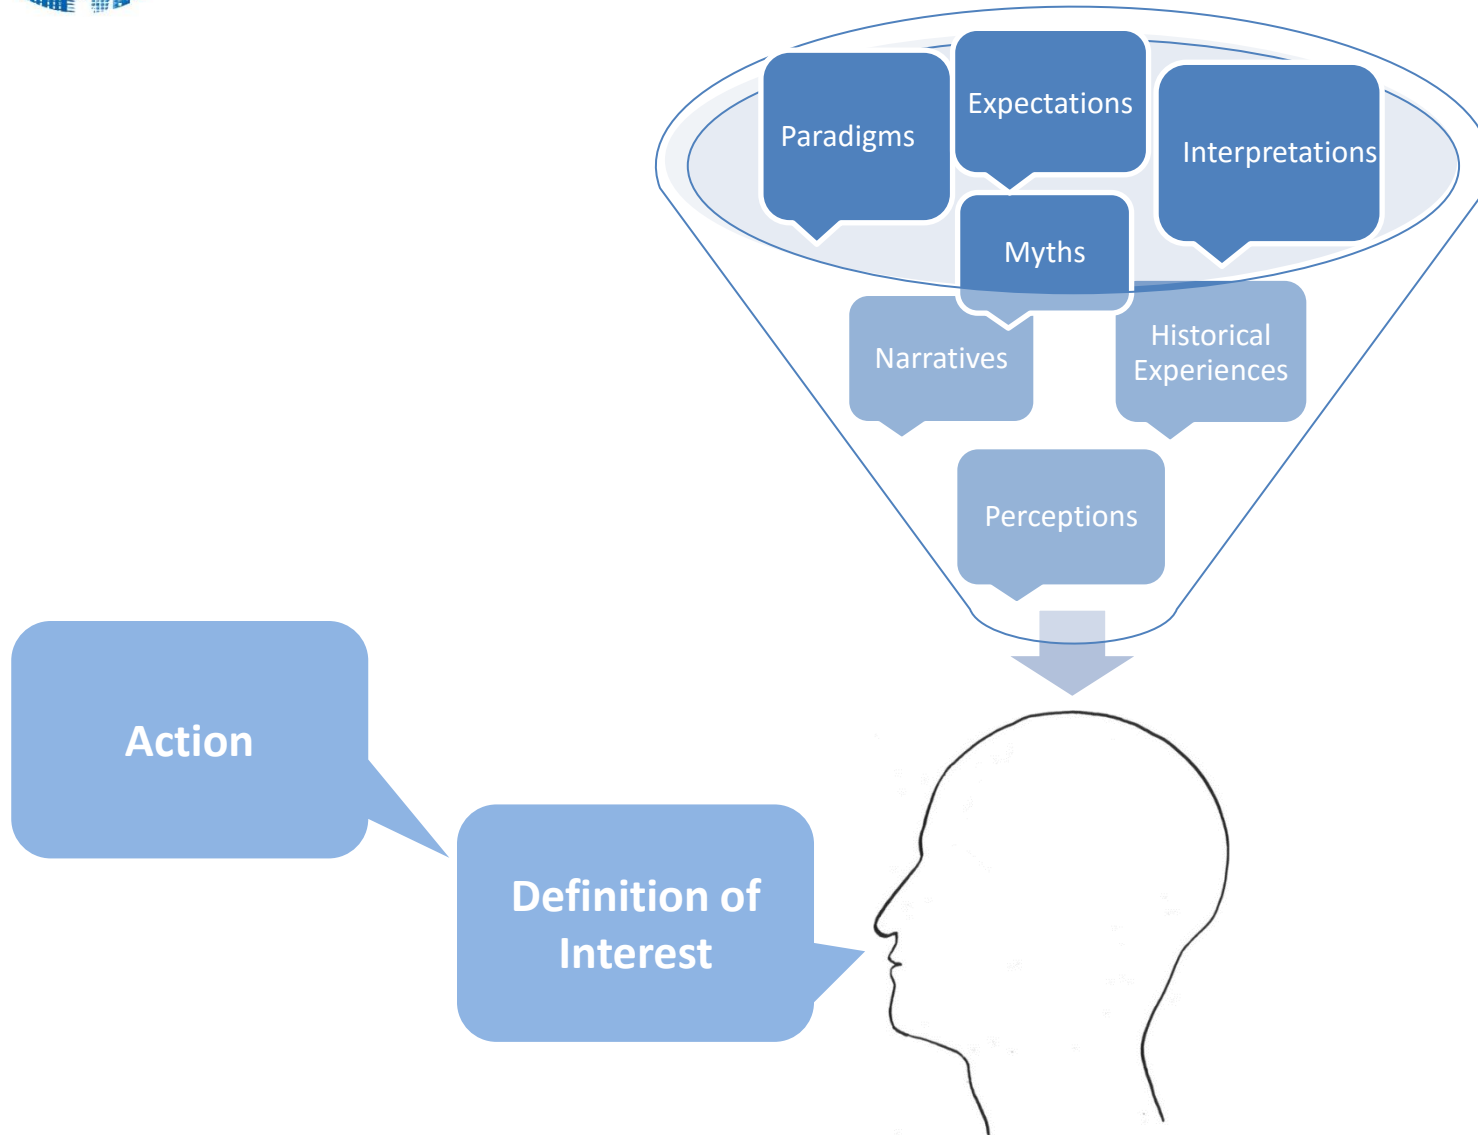

Transformative Change Makers need to produce five components...

1. Formulate an **alternative vision** of a better tomorrow (a promise), where the interests of key constituencies will converge.
2. Identify the structural drivers (“**game changers**”) which can bring about this vision.
3. Identify a potential platform for a **discourse alliance** between key constituencies.
4. Lay the platform for the discourse alliance with a **Change Narrative** which credibly explains how the game changers bring about the vision by translating facts (research, policies) into emotionally powerful stories (myths, experiences).
5. Translate discourse into action by inviting potential allies to support **catalytic projects** designed to unleash structural game changers.

... with the view of one ultimate goal: Rainbow Change Coalition

ENTRY POINT: TCM focuses on the power of discourse ...

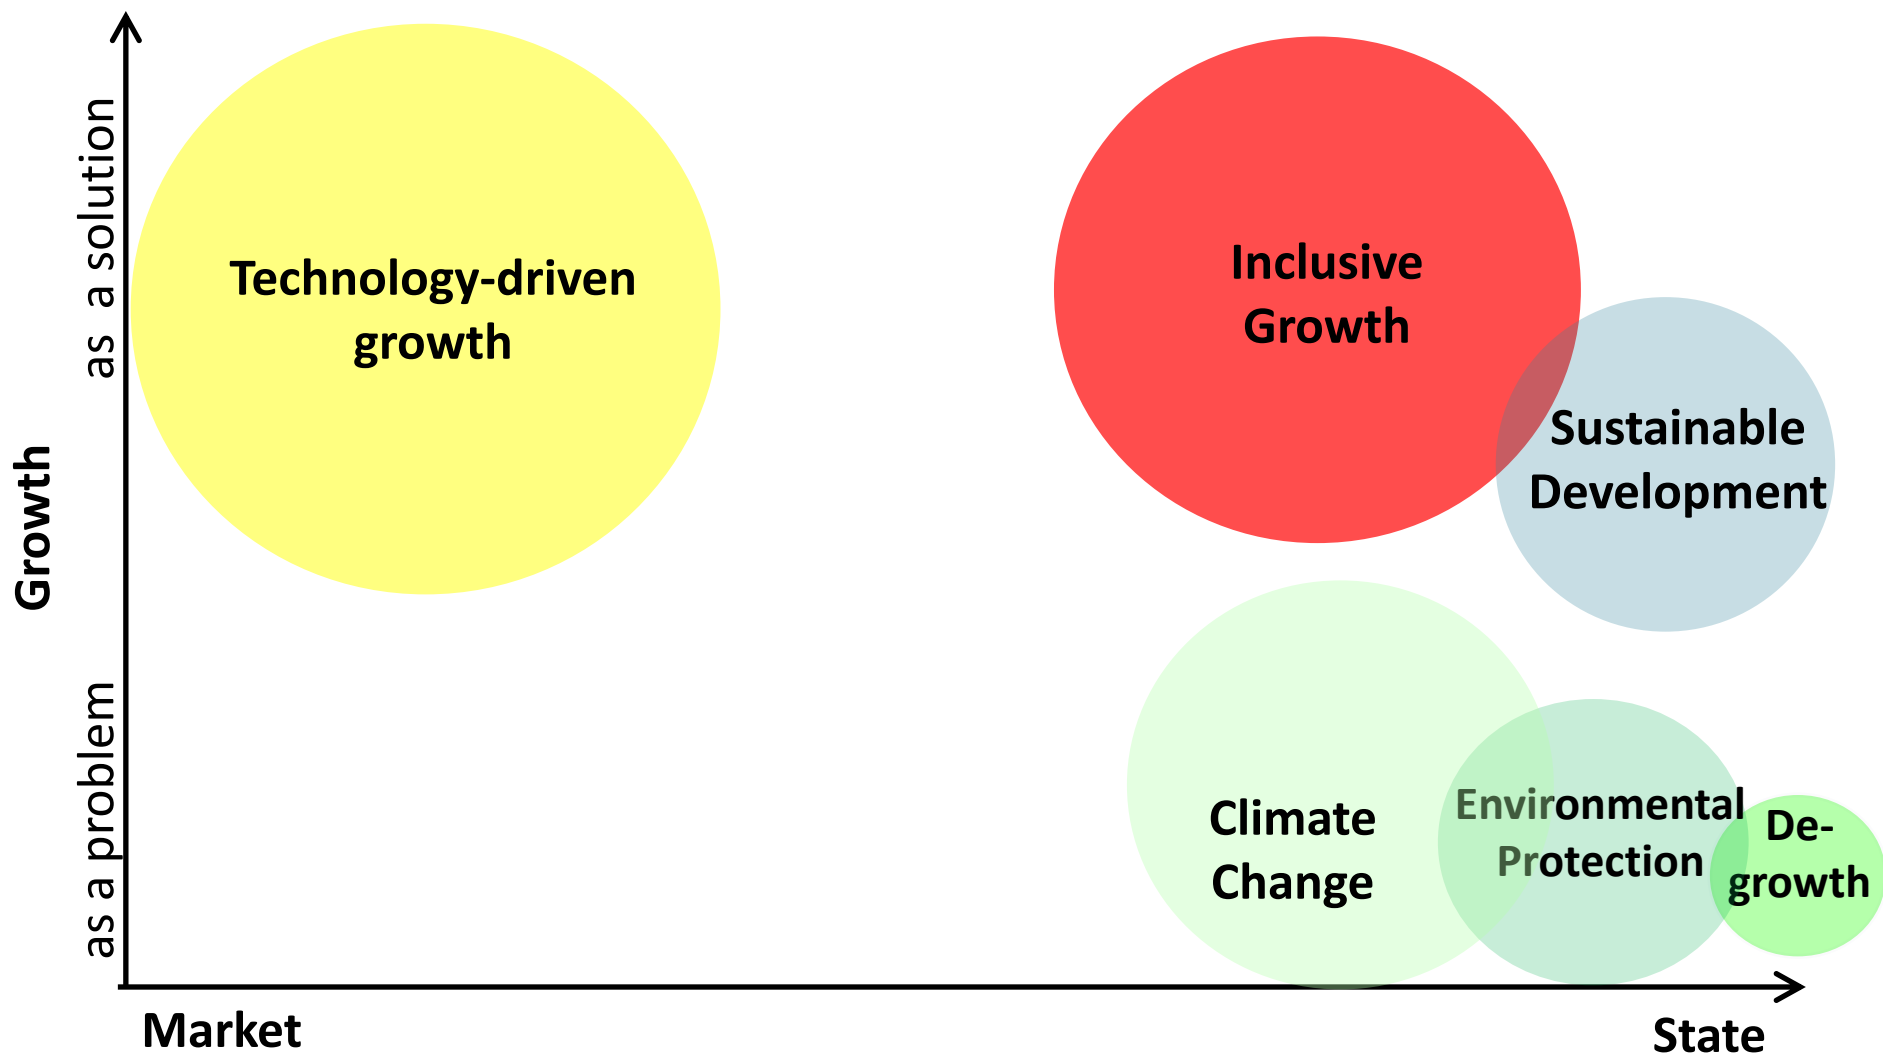

Using discourse as a means to connect ideas with actors and resources.

ECONOMY OF
TOMORROW

METHOD

Mapping the discourse landscape of economic policy

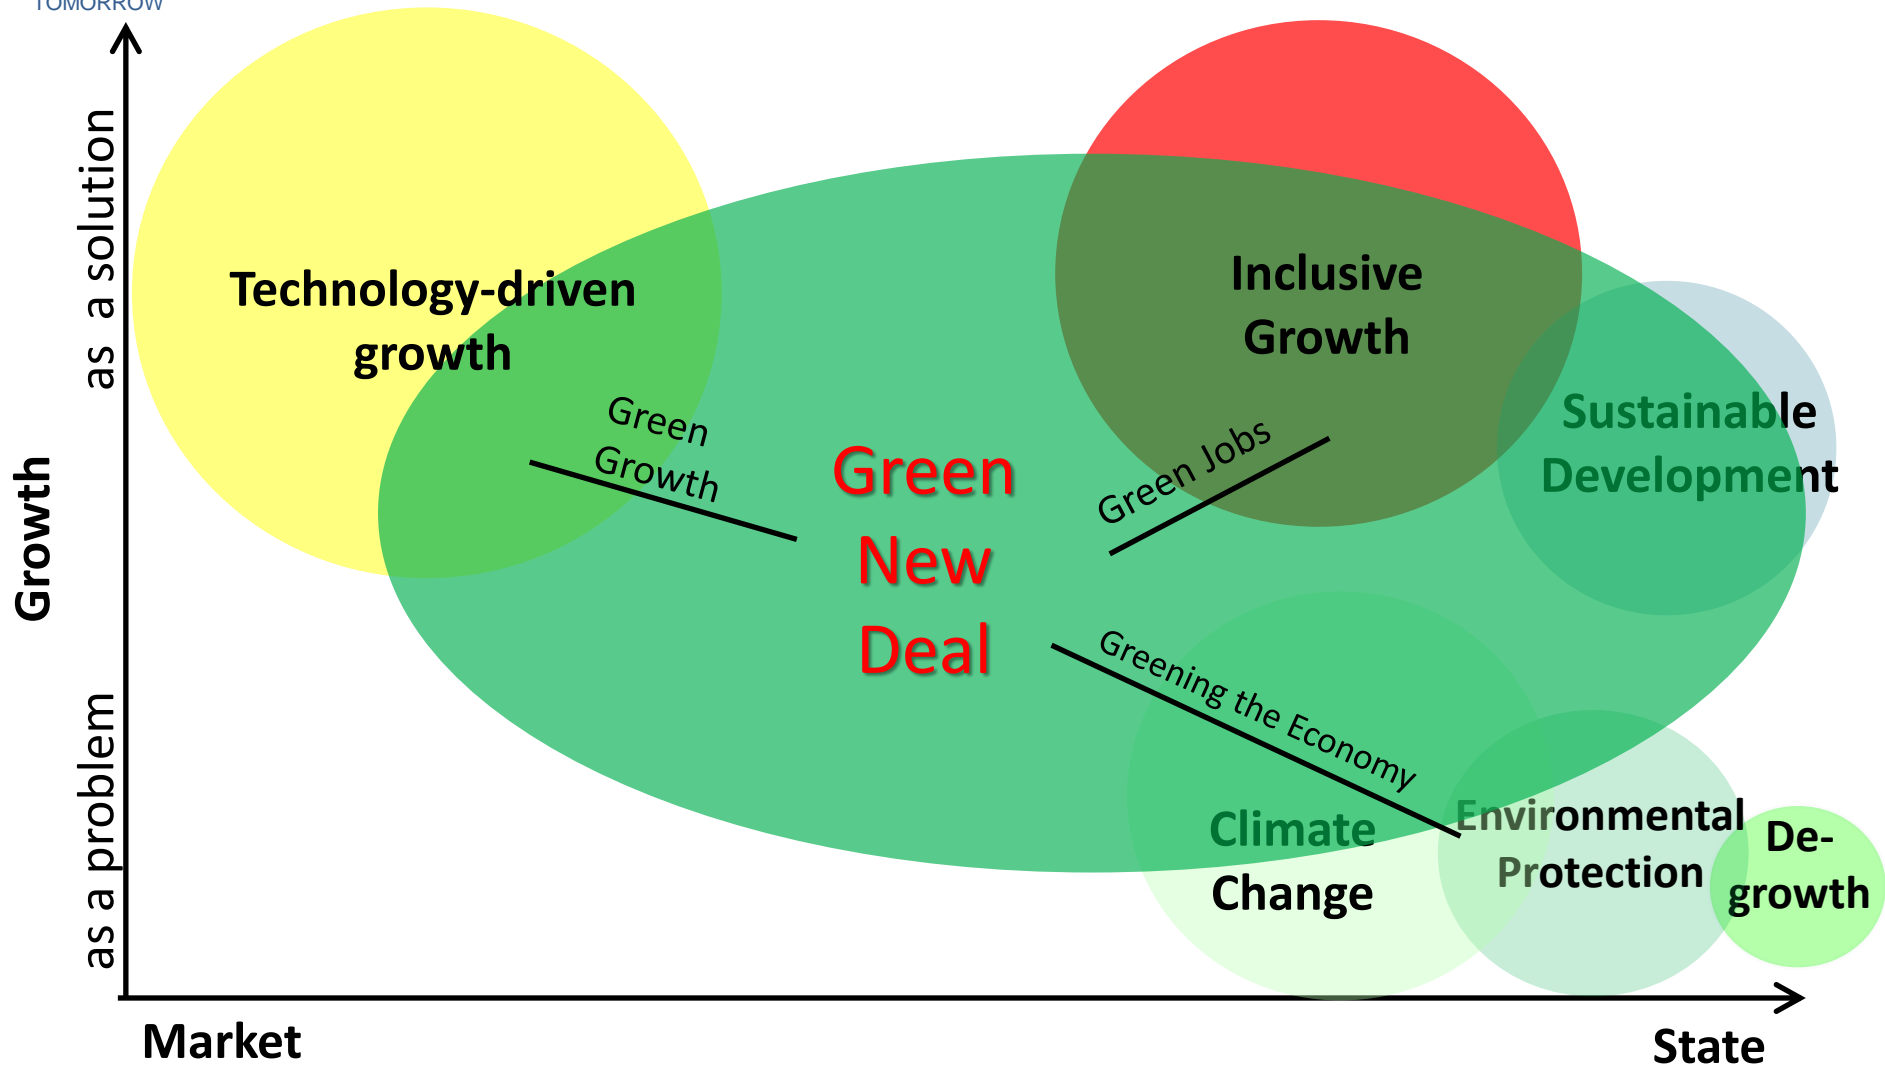

ECONOMY OF
TOMORROW

METHOD

Introduce new narrative as platform for discourse alliance

Construct a Transformative Project

The **Green New Deal** combines ...

- *Alternative vision*
(“Carbon free economy, Sustainable Climate)
- *Structural game changers*
(Investment, energy transformation, technological trade, connectivity...)
- *Catalytic projects*
(emission trading, smart grid, renewable energy R&D, investment funds, ...)
- *Change narrative*
(Forth Industrial Revolution, Green Growth, Green Jobs)

METHOD

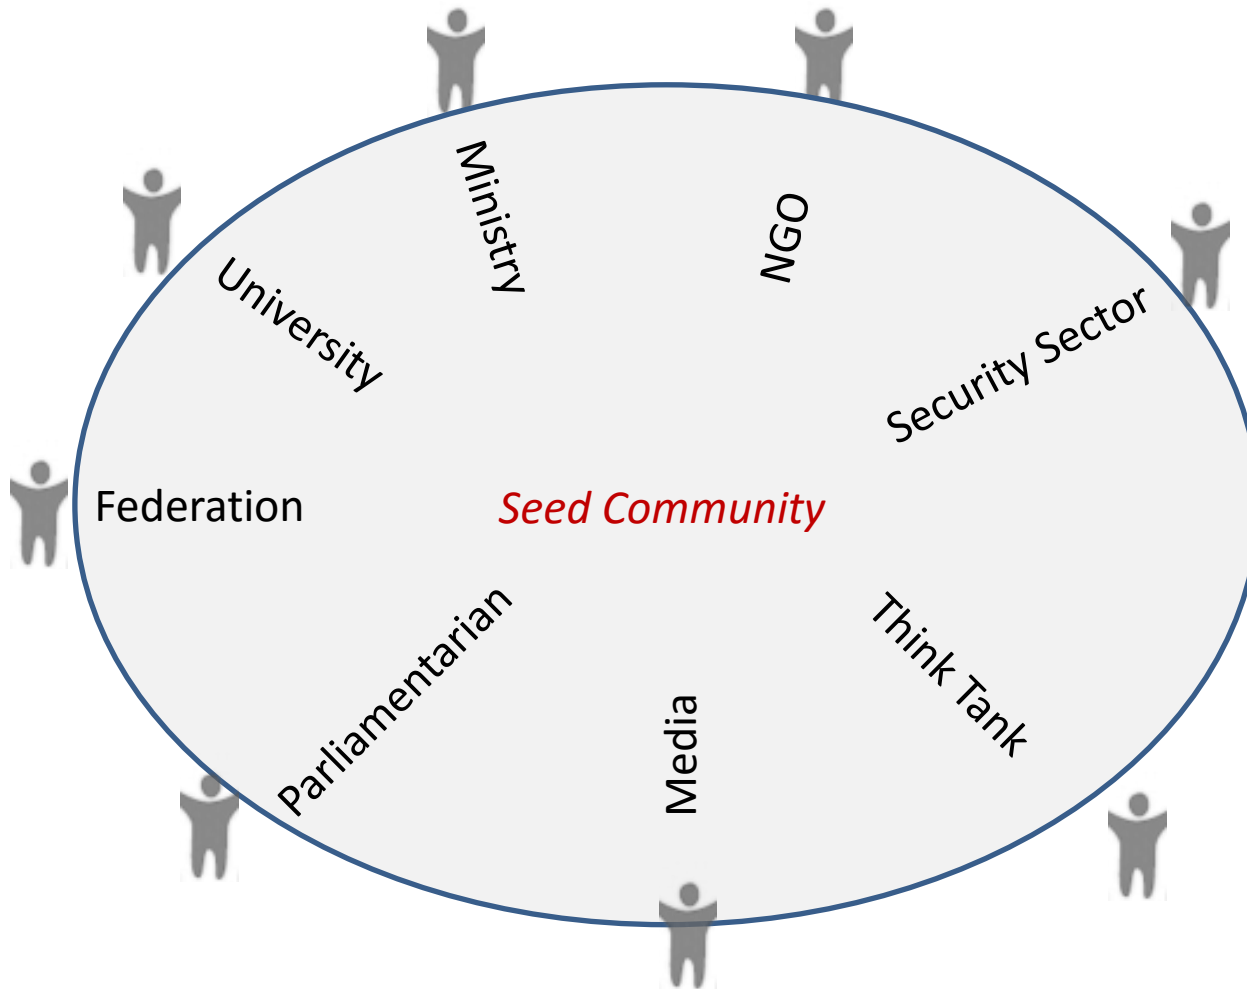

A discourse alliance aligns
the imaginations, expectations, calculations of key constituencies

... e.g. provides the discursive platform for a
social Rainbow change coalition

FORMAT

A seed community provides is a long-term working group for stakeholders ...

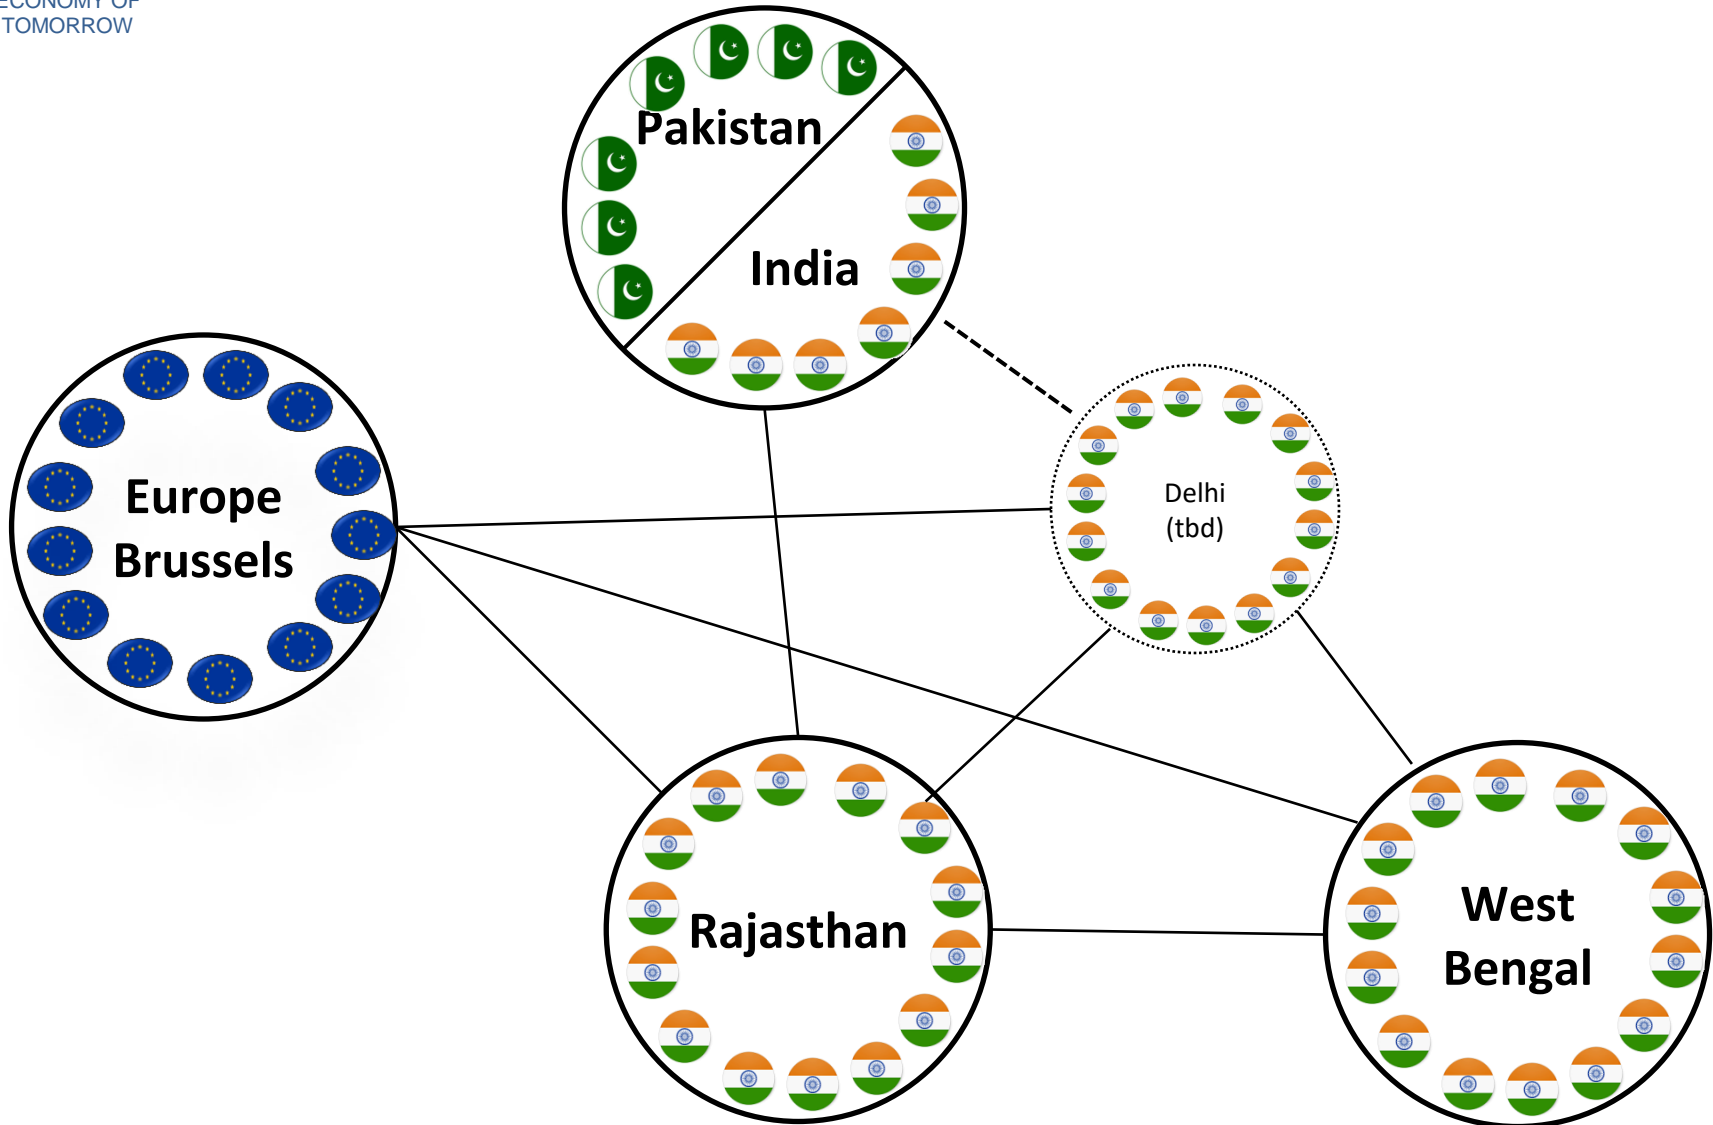

... to produce the four TCM outputs (vision, narrative, catalytic projects, discourse alliance)

ECONOMY OF
TOMORROW

Network of Energy Transformation Seed Communities

Strength of seed communities

- Safe haven shielded from hyperbole
- Time and space for out-of-the box thinking
- Methodology to encourage strategic design of transformative project
- Breaking of silos and sectoral cultures
- Bridging information gap
- Bringing together different skills, knowledge, information sets
- Incubator for concrete projects
- Breeding ground for cooperative networks
- Crystallization point for ecosystem

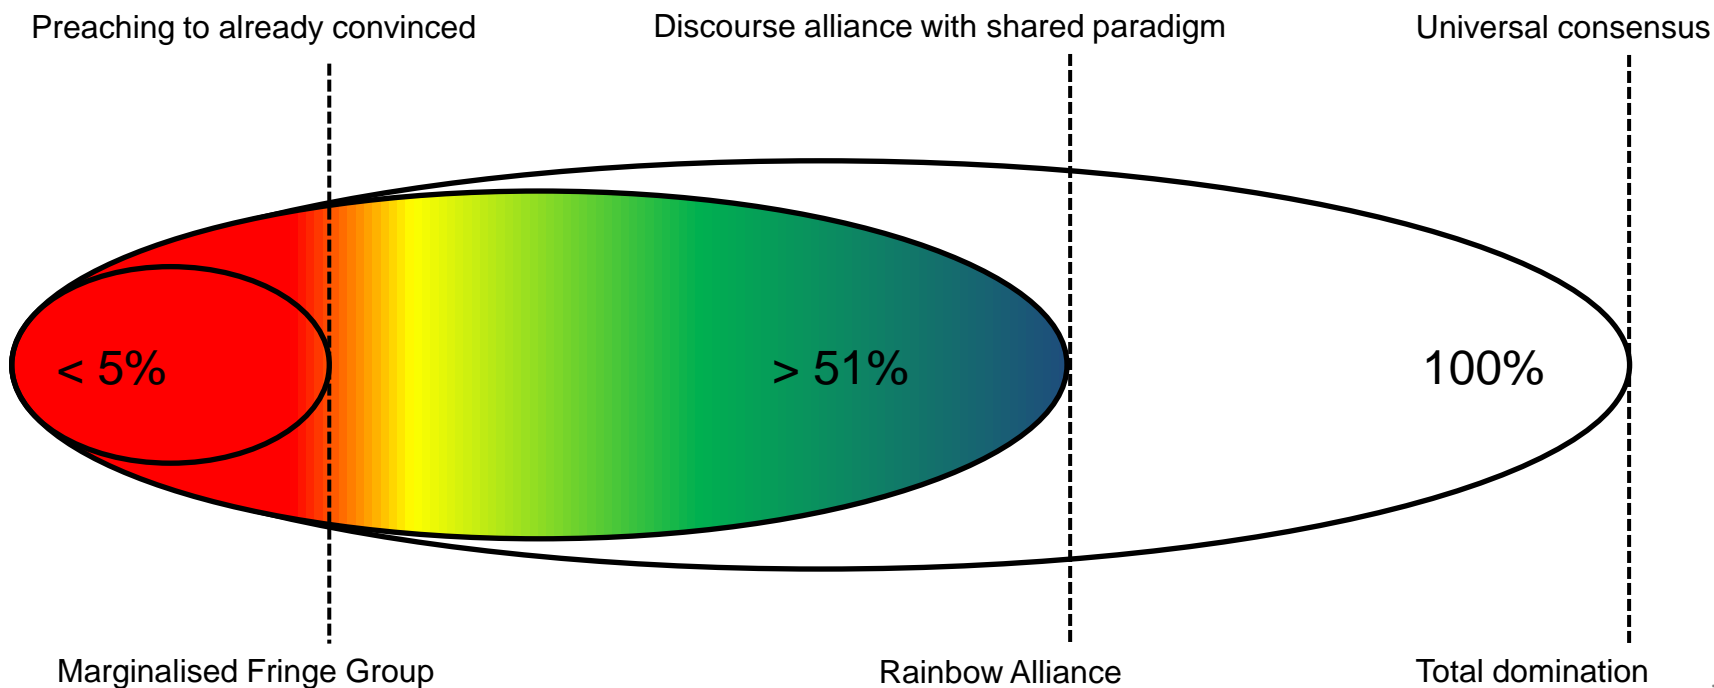

ECONOMY OF
TOMORROW

STRATEGY

The strategy aims neither at the already convinced,
nor believes that there could be universal consensus...

Communication strategy:

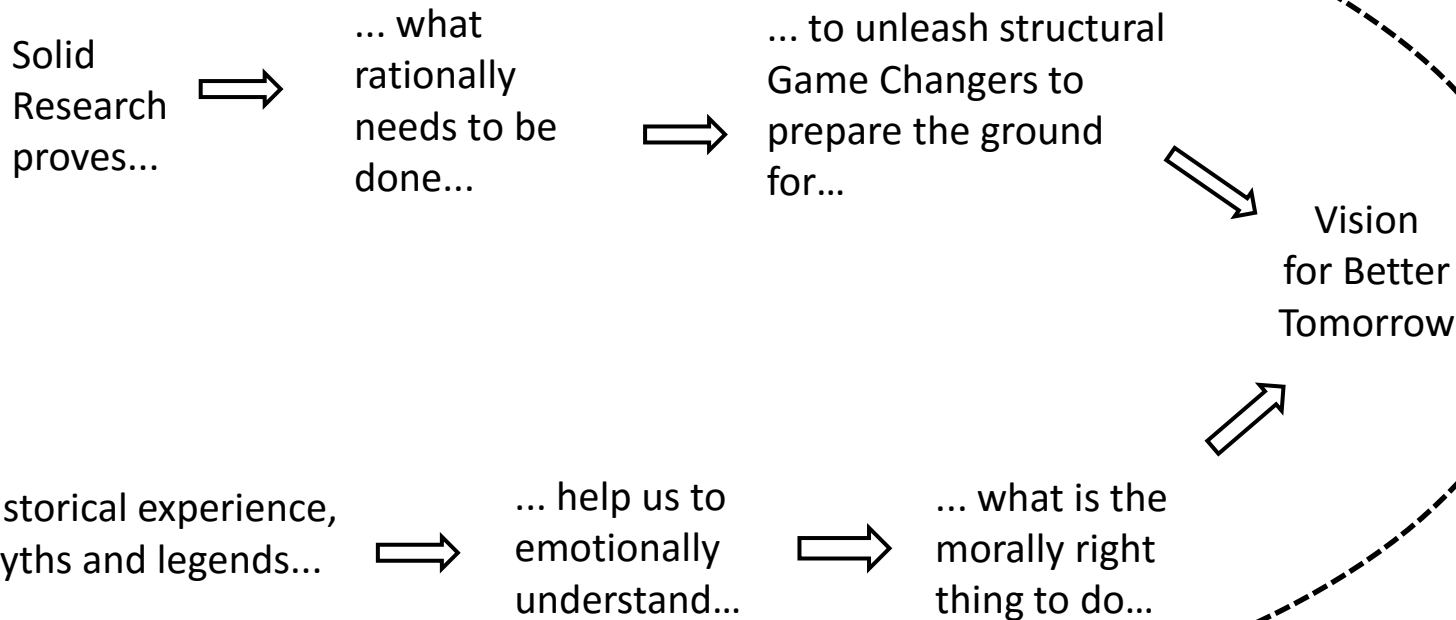

Political strategy:

... but aims at building a Rainbow coalition
based on a discourse alliance.

ECONOMY OF
TOMORROW

Credible Change Narrative...

... combines rational and emotional elements to explain
how vision can be achieved

Entry point for Transformative Change Making

Track I:
Policy Makers

????
No change coalition

Legislative Tools,
Resources

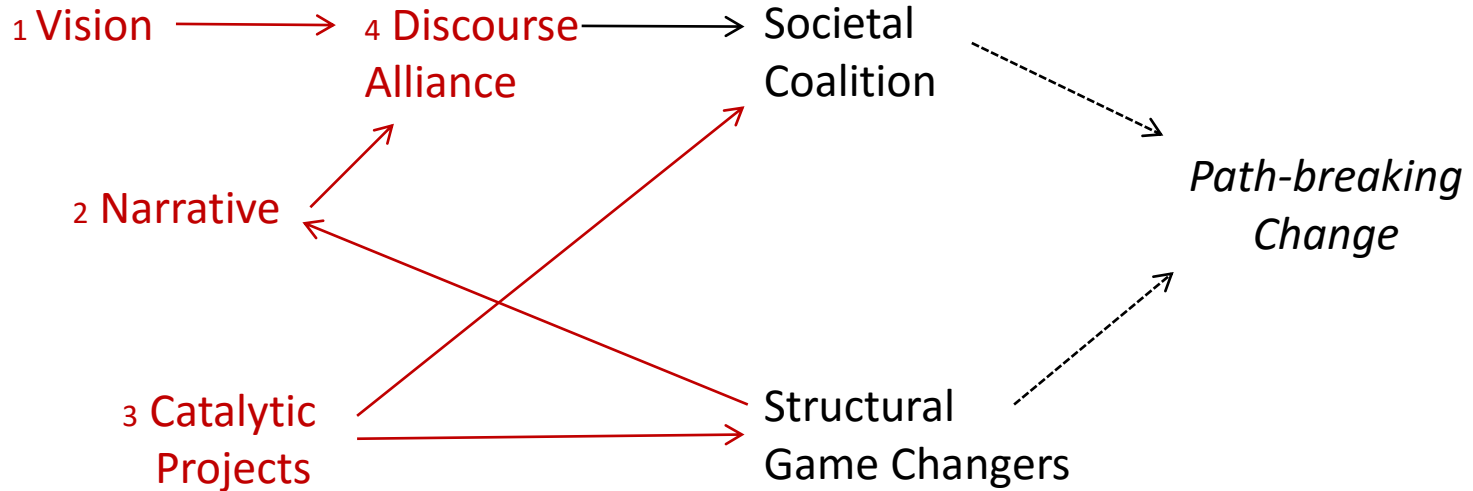

????
Contested Goals

What we do

What we hope
other will do

What we hope for

**Transformative
Change Making:
Seed Community**

Grassroots:
People to People

Change Agents

????
No means to scale up

Normative Goal
