

# Skills Development - Closing the loop

- As manufacturing technology advances, it becomes capital intensive
- It also becomes skills intensive
- Therefore we need to look for mass job creation in complementary areas to the manufacturing sector

- A parallel priority is to slow the growing rate of rural migration to urban centers which are already collapsing under this load.
- To succeed any schemes must bring together all the stakeholders in a single integrated whole.
- Another essential would be to create different scales of operation, with each one tailored to different village sizes and interlinked to form completed delivery and marketing skills.

- Once such pilot projects have been ironed out and refined they can be rolled out across the country

# Training and Skill Development Programmes

- A sponsor
- A coordinating/ enabling agency to ensure all the elements come together efficiently
- A financier to provide seed capital and possibly working capital to trainees/ entrepreneur identified by the sponsors

# Potential Sponsors

- Manufacturing (Automotive & FMCG)
- Textiles (Weaving, Dyeing & Handloom)
- Rural Heritage Tourism.
- Agriproduct Processing & Warehousing
- Panchayats and Municipal Bodies

**Thank you**
