Automotive Skills
Development Council

Ruchir Shukla
Director, Electric Mobility
Shakti Sustainable
Energy Foundation

Aditya Ramji
Senior Manager- Economist
Mahindra and Mahindra Limited

Sarthak Shukla
Assistant Policy Analyst
CUTS International
Moderator

Nations across the globe are making attempts for transition to an environmentally sustainable and socio-economically inclusive future for generations to come. A key sector which is undergoing transformation is the transport sector, which faces the head winds of a potential disruption by advent of Electric Vehicles (EVs).

In the Indian context, efforts are currently being made by the automobile industry and Central and State Governments to enhance manufacturing and adoption of EVs. However, a crucial element of this shift in the way we commute, is addressing the concerns around its impact on the people, businesses and the governments. A major impact that is connected to all these stakeholders is on the jobs in the automobile and related sectors. This implies that policy interventions and industry-led commitments regarding EVs should take into consideration the impact of e-mobility on the jobs and livelihood ecosystem related to the automobile and transport sector.

CUTS International in its pursuit to understand the changing realities of mobility in India conducted a study on 'Exploring the Impact of E-mobility Transition on Jobs: A Case Study of Jaipur, Rajasthan'. This webinar is a culmination of the study, wherein the research report will be launched and key findings will be discussed with diverse stakeholders from the EV ecosystem.

The objective is to brainstorm and mainstream the concept of just transition in policy making for the automotive and transport sectors. The insights from the discussion will inform the policy discourse around EVs, for the State of Rajasthan, and other relevant States in India.
