National Institute of Technology,
Jaipur

SUNIL BHATNAGAR
Director International Business-
Emerging Technologies, Sanvaru
Technology Ltd., Haryana

* TBC

According to World Health Organisation, India is home to some of the major polluted cities in the world. A significant contributor to the air pollution is the transport sector, in which road transport is the main sub-sector accounting for over 95 percent of the total transport sector emissions. Electric vehicles (EV) can potentially be a game changer for the environmental challenges posed by the commercial vehicles. However, as per the EV sales data, it constitutes to be less than 01 percent of the total vehicles sold as of now.

“Accelerating Electric vehicle adoption in Rajasthan”, a project implemented by CUTS undertook state-level research, advocacy, networking and capacity-building on the prospects of an actionable policy roadmap for the state to enhance the uptake of EVs in Rajasthan. The project adopted mixed-methods approach to identify the current supply and demand side gaps as well as various policy practices that could be executed by the state level authorities to ease the transition to EVs in Rajasthan. This conference is organised to show the final research output and engender wider discussion on the same.
