

Future of Data Governance in India A Consumer Perspective

1st Edition of Manthan Series #FosterDigitalEconomy

12
March 2021
Friday
16:00 - 17:30 hrs (IST)

BIPUL CHATTERJEE

Executive Director, CUTS International
(Opening Remarks)

DR. AMAR PATNAIK

Member of Parliament and Member
JPC on Personal Data Protection Bill, 2019

B. N. SATPATHY

Senior Consultant
Office of Principal
Scientific Advisor, Gol

DR. LINNET TAYLOR

Associate Professor, Tilburg University
Lead of Global Data Justice Project

AMOL KULKARNI

Director (Research), CUTS International
(Moderator)

SRIKANTH LAKSHMANAN

Founder, Cashless Consumer

NEHAA CHAUDHARI

Partner, Ikigai Law

AMLAN MOHANTY

Government Affairs and
Public Policy Counsel, Google India

SUBHANGI HEDA

Assistant Policy Analyst, CUTS International
(Presenter)

Institutions and governments worldwide are striving to create frameworks for data governance while trying to achieve an adequate balance amongst parameters such as data rights, fair competition, innovation, and consumer protection. Similar trends have been observed in India, with Personal Data Protection Bill in the pipeline; proposed Non-Personal Data (NPD) Governance Framework; recently released intermediary guidelines; and other sector level frameworks. Since consumers feature across the data value chain, consumer welfare needs to be central to future of data governance.

This webinar aims to engage with key stakeholders and policymakers to deliberate on following concerns in the data governance ecosystem from consumers' perspective:

- How appropriate balance can be achieved between community and individual rights in data, particularly when the state requires access to data to prevent harm?
- How can the privacy concerns emerging from blurred binaries between personal and NPD could be addressed, through appropriate institutional frameworks?
- How can data trustees' and intermediaries' framework empower consumers to exercise their rights over data, without unduly impacting innovation?
- What are the emerging consumers harms in the data ecosystem? What can be the effective redress mechanisms for the same?
