CEO and Co-Founder, Arrka

In 2017, the Supreme Court of India upheld privacy as a fundamental right. This initiated government's attempt to enact a Personal Data Protection Bill, which is currently under consideration by the Joint Parliamentary Committee. In the wake of increased use of mobile applications for myriad of digital services, there also have been rise in privacy concerns amongst consumers.

Considering this, the following questions are becoming increasingly important-

- What are the privacy issues associated with mobile applications & websites?
- What are the current upheavals related to privacy in global digital ecosystems? And, why and how do these affect consumers?
- What privacy policy reforms are required to address these issues? What can consumers do to protect their privacy?

To this end, on the occasion of **Safer Internet Day 2021**, CUTS International is hosting an online session to demystify these questions and shed light on some important aspects of privacy in mobile applications.
