

Protecting Children's Data *Analysing Perspectives of Parents & Children*

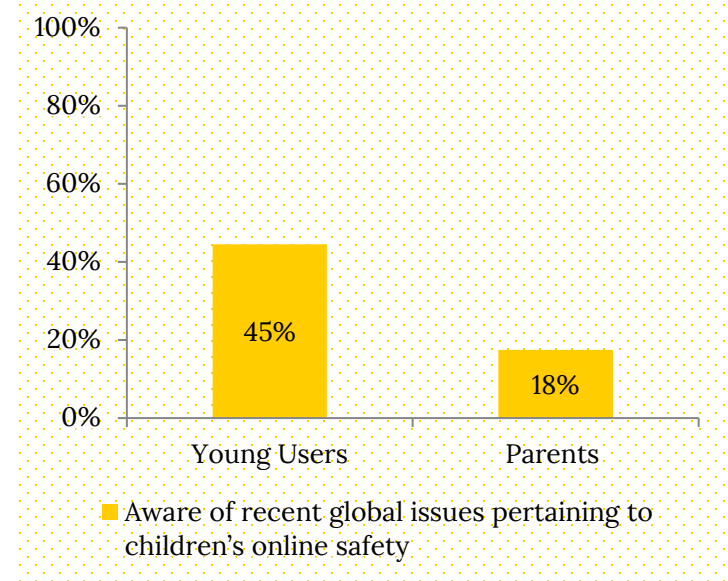

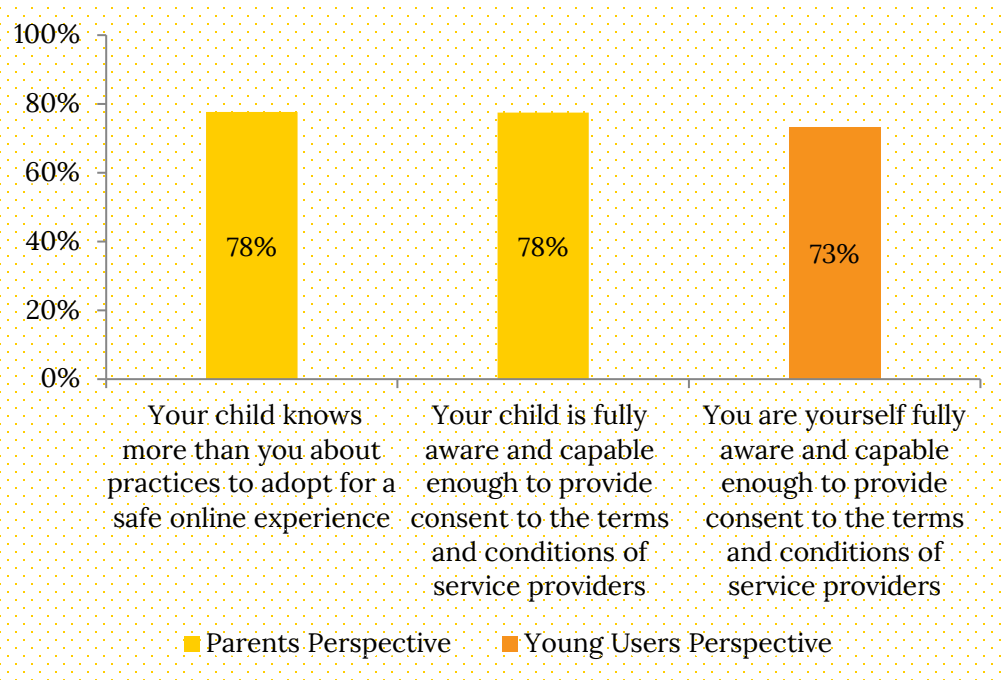

Project Details Available [here](#)

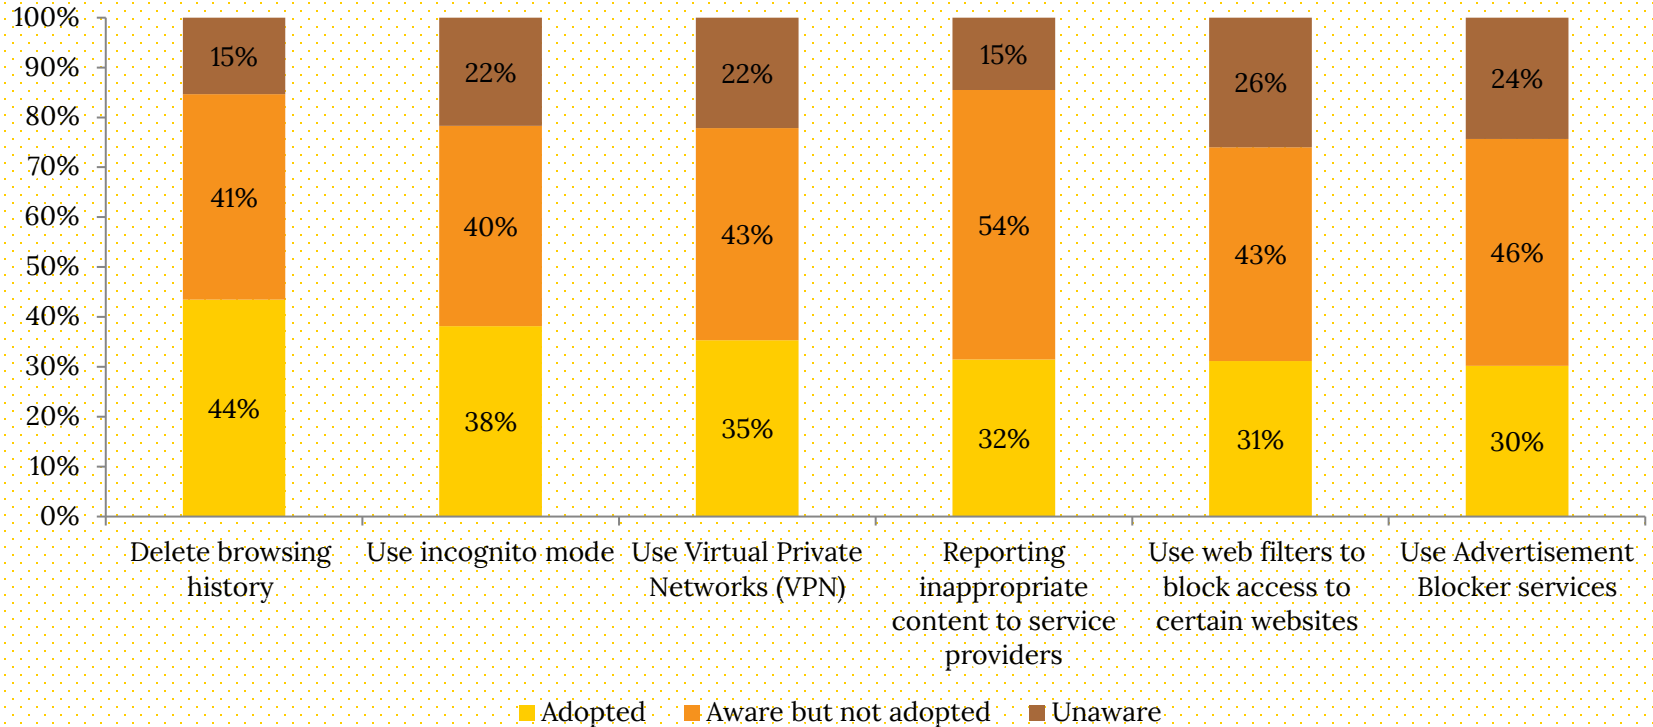

Many young users avail various popular data-driven online services, without the knowledge of their parents. Significant number of parents are comfortable with their child availing services without their permission.

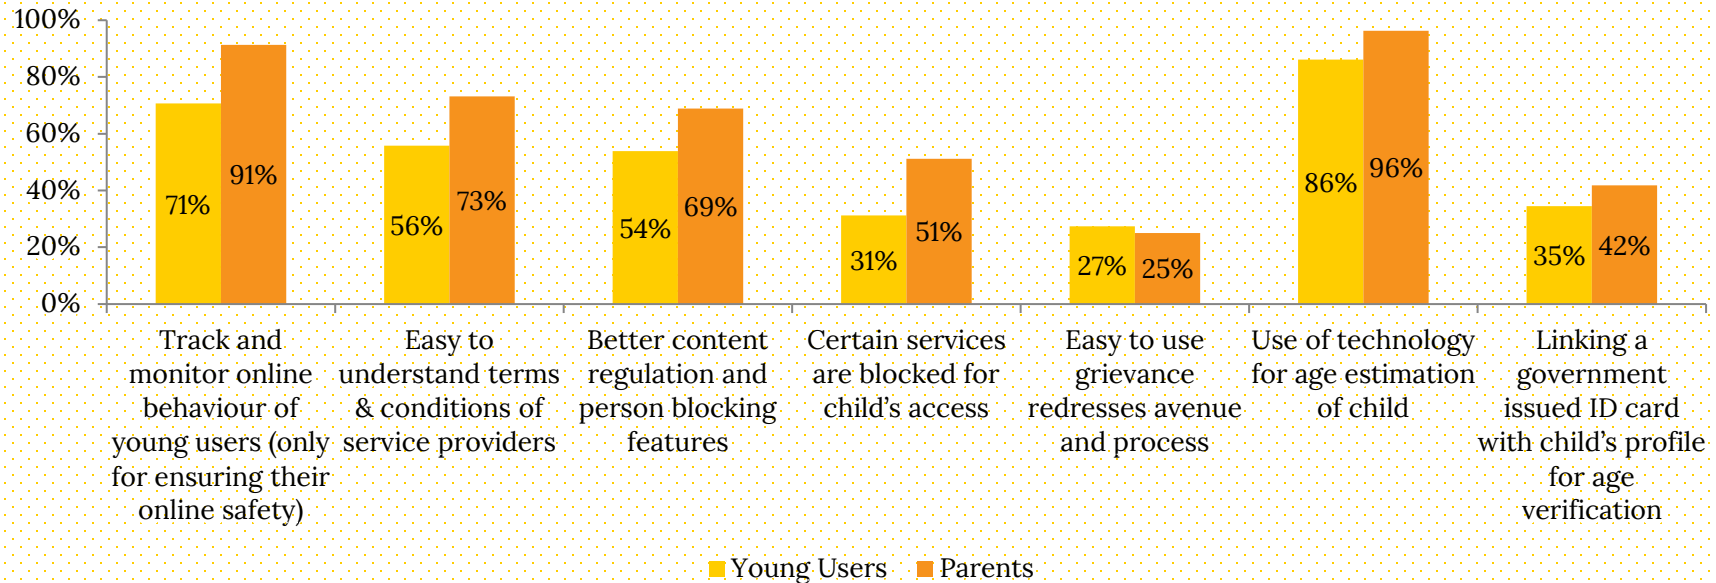

Most parents believe that their child knows more than them about practices to adopt for a safe online experience, and are capable to provide consent to the terms & conditions of service providers, a claim seconded by young users.

Many young users encounter different types of problematic experiences online. Most of them claim to be aware of various tools and strategies to overcome problematic experiences. However, many do not implement them.

Most parents and young users are comfortable with service providers taking different measures to ensure a safe online experience for young users. They also prefer use of technology for age estimation of users, than linking a ID card.

Separately, most young users do not want parents to monitor their online activity

70%

Young users do not want parents to monitor their online activity

45%

Parents do not want to monitor their child's online activity

Thank You

Comments and suggestions are welcome.
